 $\textbf{Q1)} \ \ \text{The k-digit number N is an Armstrong number if and only if the k-th power of each digit}$

sums to N.

Given a positive integer N, return true if and only if it is an Armstrong number.

Note:

1 <= N <= 10^8

Hint: 153 is a 3-digit number, and $153 = 1^3 + 5^3 + 3^3$.

Sample Input:

153

Sample Output:

true

Sample Input:

123

Sample Output:

false

Sample Input:

1634

Sample Output:

True

Code:

```
Answer: (penalty regime: 0 %)
      #include<stdio.h>
      #include<math.h>
   2
   3 - int main(){
          int n,a,p=0,t,sum=0,x;
   4
   5
          scanf("%d",&n);
   6
          t=n;
   7
           a=n;
           while(t!=0){
   8 +
   9
              t/=10;
  10
              p++;
  11
           while(n!=0){
  12 +
  13
              x=n%10;
  14
              sum=sum+pow(x,p);
  15
              n/=10;
  16
  17
  18
           if(sum==a)
           printf("true");
  19
  20
           else
           printf("false");
  21
  22 }
```

Passed all tests! <

Q3) A number is considered lucky if it contains either 3 or 4 or 3 and 4 both in it. Write a program to print the nth lucky number. Example, 1st lucky number is 3, and 2nd lucky number is 4 and 3rd lucky number is 33 and 4th lucky number is 34 and so on. Note that 13, 40 etc., are not lucky as they have other numbers in it.

The program should accept a number 'n' as input and display the nth lucky number as output.

Sample Input 1:

3

Sample Output 1:

33

Code:

```
Answer: (penalty regime: 0 %)
   1 #include<stdio.h>
   2
      int main()
   3 + {
           long int i,j;
   4
   5
           int r,n,c=0,f;
           scanf("%d",&n);
for(i=1;c<=n;i++){</pre>
   6
   7 ,
   8
               f=0;
   9
               j=i;
  10 +
               while(j>0){
  11
                   r=j%10;
                   if(r==3||r==4)
  12
                   j=j/10;
  13
                   else{
  14 +
                        f=1;
  15
  16
                        break;
  17
                   }
  18
  19
               if(f==0){
  20 +
  21
                   C++;
  22
                    if(c==n)
  23
                    break;
  24
  25
  26
  27
           printf("%ld",i);
  28
  29 }
```

OUTPUT:
